

ABSTRACT

A user installation interfaces a television or like device with a video broadcast multi-channel feed signal. The installation comprises: a connector for connection to a video broadcast multi-channel feed receiver installation, a splitter unit attached to said connector for splitting incoming signals from said connector into a video feed signal
5 and a signal received from a terrestrial network, and for directing outgoing signals for said terrestrial network to said connector, said terrestrial network signal providing a return link to support user interaction from said interfaced device.
